

AMXDmax

In-Flight Bladder Relief

Certified Safe-To-Fly USAF/USN/USMC/JSF

Female Pad

IFP-15-2-2

HYDRATE AND DOMINATE THE SKY

**Eliminate Tactical
Dehydration and
maximize flight
performance with
the AMXDmax**

Tactical dehydration is dangerous.

Dehydration severely impacts G-tolerance, situational awareness, and decision making ability. It can affect anyone, even pilots with decades of flight experience. It only takes a second to lose your aircraft or your life.

The **AMXDmax** allows pilots to hydrate properly and relieve their bladder mid-flight, without interrupting the mission. Now fully-automatic, hands free, and with a slimmer profile, the AMXDmax lets you reach your true potential.
